

Multiply Strings

Question: Given two numbers represented as strings, return multiplication of the numbers as a string.

Note: The numbers can be arbitrarily large and are non-negative

Solutions:

```
class Solution:
```

```
    # @param num1, a string
```

```
    # @param num2, a string
```

```
    # @return a string
```

```
    def multiply(self, num1, num2):
```

```
        return str(int(num1)*int(num2))
```

```
Solution().multiply("122326161616161616","-161651616161616")
```
