Reverse Integer

Question: Reverse digits of an integer.

Example1: x = 123, return 321

Example2: x = -123, return -321.

Solutions:

class Solution:

  # @return an integer

  def reverse(self, x):

    if x<0:

      sign = -1

    else:

      sign = 1

    strx=str(abs(x))

    r = strx[::-1]

    return sign*int(r)

Solution().reverse(123)
